

MODULAR LOCAL AI WORKSPACES

Own Your AI. Protect Your Data. Escape the Cloud.

Modular delivers private, local AI Workspaces built for teams that demand compliance, confidentiality, and control.

Across legal, healthcare, and public-sector organizations, trust in SaaS AI is eroding.

Rising costs, regulatory pressure, and high-profile data exposure events have made one thing clear: businesses that handle sensitive data can't afford to outsource their AI stack to opaque cloud services.

Hosted inside a FedRAMP-grade data center, our platform gives organizations everything they need to deploy secure, open-source AIOps and LLM pipelines - without sending prompts or audit trails to a third party.

Whether for legal discovery, RAG-based document workflows, contract intelligence, or decision support, Modular brings the power of modern AI to environments where trust is non-negotiable.

Why Modular?

- **Data never leaves your system:** Inference happens in your environment. Prompts, logs, outputs stay inside.
- **Open-source by default:** Curated open-source models and containerized AIOps stacks - no vendor lock-in or escalating licensing fees.
- **Compliance-ready:** Built and operated in facilities that meet FedRAMP security standards.
- **AI, simplified:** Secure RAG pipelines, GPU-optimized inference, and observability out of the box.
- **Local-first design:** Deployed in our facility or yours. Your stack. Your rules.

Legal teams choose Modular to ensure AI aligns with confidentiality requirements. Healthcare systems deploy us to meet HIPAA obligations. Financial services firms use Modular to gain LLM benefits while satisfying audit and governance constraints.

**CLOUD AI WAS BUILT FOR SCALE.
MODULAR IS BUILT FOR RESPONSIBILITY.**
